Commercial rollout of four-dimensional respiratory scanning expands into three new markets

General practitioners and respiratory specialists in Brisbane, Wagga Wagga and Albury can now order highly visual reports of patients' lung function based upon four-dimensional scans, as 4DMedical's collaboration with I-MED Radiology Network expands into new markets.

Following the successful launch of XV Technology-enabled Ventilation Reports at I-MED's imaging clinic at Berwick in south-eastern metropolitan Melbourne, clinicians and specialists based in three more regions are now able to gain the valuable insights available through 4DMedical's unique capability, compatible with state-of-the-art infrastructure in place at Australia's largest diagnostic imaging provider.

From today, clinicians can refer patients to I-MED clinics at St Andrew's War Memorial Hospital at Spring Hill in Brisbane, and to clinics in Wagga Wagga and Albury.

4DMedical's unique XV Technology is proving particularly useful as a surveillance tool, monitoring the evolving condition of patients' lungs and response to therapeutic interventions such as courses of pharmaceuticals and implantation of devices. Insights have been gained through commercial operations and piloting into conditions including post-COVID, asthma, chronic obstructive pulmonary disease (COPD), bronchiectasis, sarcoidosis and silicosis.

"Expansion of our proven capability to Brisbane, Wagga Wagga and Albury means many more people can access the latest technology in respiratory imaging," said 4DMedical's Managing Director and Chief Executive Officer, Dr Andreas Fouras. "This latest phase in our successful commercial rollout enables patients afflicted with respiratory disease to now access the world's most advanced four-dimensional visualisation of their lungs at four locations in three states – another milestone achieved in realising our ambitious strategy."

BACKGROUNDER

4DMedical is a medical technology company transforming respiratory diagnostics for all lung disorders including coronavirus, asthma, chronic obstructive pulmonary disease (COPD), cystic fibrosis and cancer.

Through its technology, 4DMedical is providing clinicians with greater insights into lung function and the impact of diseases and treatment interventions. Patients are informed and empowered through such knowledge. Industry partners utilise our technology to understand the efficacy of therapeutic interventions.

The unique 4DMedical XV Technology accurately and quickly scans lung function as the patient breathes, assisting in providing sensitive, early diagnosis, and in monitoring changes over time. The company's Software-as-a-Service (SaaS)-enabled scans delivering comprehensive information and insights, showing even subtle variations in lung function down to the finest details, using lower and safer levels of radiation than traditional methods.

Better information means better decisions, and better outcomes.

Based in Melbourne, Australia and Los Angeles, USA, 4DMedical was founded in 2012 and is listed on the Australian Securities Exchange (ASX: 4DX).
